Professor
Political Science
Columbia University

Professor Epstein applies game theory and statistical modeling to the analysis of political institutions. His research includes such diverse topics as racial redistricting, legislative organization, interbranch delegation of authority, Internet voting, democratic transitions, and ethnic politics. Working with O’Halloran, Epstein served as a consulting expert and expert witness in the state of Georgia’s redistricting efforts following the year 2000 census. Their efforts, chronicled in their forthcoming book, *Dividing Lines: Racial Redistricting and Substantive Representation*, culminated in the Supreme Court case *Georgia vs. Ashcroft*; the Court cited both their testimony and their published work in its opinion, which revolutionized the judicial interpretation of the Voting Rights Act. Epstein is also the co-author of *Delegating Powers*, as well as more than 20 articles in leading journals, including *American Political Science Review*, *American Journal of Political Science*, and *Journal of Law, Economics, and Organization*. Epstein received a BA in Applied Mathematics from Harvard University and a PhD in Political Economics from the Graduate School of Business at Stanford University.
